

Court Owner Dashboard: Competitive Analysis for Courtify

What PlayPro, Poncho.pk, On Spot, KhelPoint, PakPlay, Legends Arena, and global category leaders give venue owners — and what Courtify should build.

1. The Short Version

Every serious competitor in Pakistan has converged on roughly the same **owner-side feature floor**: real-time calendar, online payments with auto-payout, basic analytics, and multi-court management. That’s table stakes now, not a differentiator. Nobody in Pakistan yet offers what global leaders (Playtomic Manager, Playbypoint) treat as standard: **CRM-grade player data, membership/loyalty engines, dynamic pricing, and white-label branding**. That gap is Courtify’s opening — but it’s also where the real engineering cost lives, so this document tells you exactly what to prioritize and why.

One structural finding worth internalizing before anything else: **several “competitor” venues in Pakistan aren’t running custom-built software at all**. Legends Arena — arguably the most premium padel/multisport facility in Karachi — runs its DHA Phase 5 flagship on **Playbypoint** (a US SaaS product) and another location on **Skedda** (an Australian scheduling tool), both white-labeled under the Legends Arena name. This tells you two things: (1) venue owners don’t care whose logo is on the backend as long as it works, and (2) the local “competitors” you’re worried about are mostly companies who built their *own* thin booking layer rather than a deep operations platform — the actual bar you need to clear is set by foreign SaaS tools most Pakistani owners have never even considered because of price and localization.

2. Competitor-by-Competitor Breakdown

2.1 PlayPro (playpro.pk)

Positioning: Pakistan’s most visible padel-first booking + tournament app. 4.7★, 10,000+ downloads on Google Play — the most established local player by user count.

Owner/admin dashboard features (confirmed from store listings and product pages): - Central admin dashboard for overall club operations

- Club listing and management (multi-venue support)
- Sports & facility management (configure which sports/courts exist per club)
- Booking calendar (both calendar and list views)
- Manual booking entry from the admin side (for phone/walk-in bookings)
- Detailed per-booking views for staff
- Tournament creation and management tools
- Level-threshold configuration (their skill-rating system, tunable by admin)
- Location hierarchy settings (countries/states/cities)
- Payment methods on the player side: cash, PayFast (card + Easypaisa wallet), bank transfer, full-or-partial payment

What it’s missing (based on scope of public materials): No visible CRM/player history tools for owners, no loyalty/membership system, no dynamic pricing, no stated payout automation details, no staff role/permission tiers mentioned.

Business model: Not publicly stated — likely commission-based given no visible SaaS pricing page for venues.

Notable: PlayPro also **white-labels its booking engine to other venues** — Sport On (Karachi, KMC-powered multisport complex, 10K Instagram followers) explicitly tells its own followers to “download the Play Pro App to book your slots.” This means PlayPro isn’t just a competitor — some venues you might try to onboard could already be locked into PlayPro’s ecosystem as their *booking infrastructure provider*, not just as a discovery channel. Worth checking before you pitch a venue.

2.2 Poncho (poncho.pk)

Positioning: Newer entrant, padel-heavy, tournament/ranking-focused, backed by an official partnership with the **Pakistan Padel Federation** for national rankings.

Owner/venue-side features (from store listing): - Manage bookings, payments, and schedules

- Automated reminders
- Flexible slot management

That’s the entire public description — thin relative to PlayPro. Poncho’s product energy is clearly going into the *player* side (tournaments, national ranking integration, “Game Match” social features) rather than deep venue tooling.

Real user sentiment (from App Store reviews): - Positive: “Booking playgrounds is quick, the layout is simple, everything just works.” / “The UI is so intuitive, booking a court is literally hassle free.”

- Negative: **OTP/WhatsApp verification failures at signup** — a recurring complaint (“Can’t sign up. Once I do don’t get the WA OTP. Tried multiple times and failed.”) This is a real, repeated pain point — their WhatsApp OTP auth flow breaks for some users.

Takeaway for Courtify: Poncho’s national-federation ranking integration is a smart credibility move you don’t currently have an equivalent for. Their auth reliability issue is a cautionary tale — whatever OTP/verification method Courtify uses (WhatsApp, SMS) needs to be bulletproof at launch, because this is exactly the kind of bug that kills first impressions.

2.3 On Spot (onspotapp.com / sporton.pk)

Positioning: Karachi-focused, broad sport coverage (futsal, padel, cricket, basketball, throwball, pickleball, tennis, badminton, paintball).

“On Spot Services for Court Owners” — the most explicit owner-facing feature list of any competitor found: - User-friendly dashboard for court availability, bookings, and schedules

- In-app communication tools + notifications to stay connected with players
- **Real-time analytics and reports on court usage, customer trends, and revenue performance**
- Discovery/marketing — surfaced to thousands of players using the app
- **Dynamic pricing and peak-hour management** for maximizing utilization
- Full booking visibility

This is the most complete public feature list among Pakistani competitors — On Spot is explicitly selling owners on *data* (customer trends, revenue performance) and *yield management* (dynamic/peak pricing), not just a calendar.

2.4 KhelPoint (business.khelfpoint.com)

Positioning: The most explicitly “operating system”-branded competitor — positions itself as venue infrastructure, not just a booking app.

Stated features: - Instant booking + one-tap payment, real-time calendar sync

- Encrypted payments with **auto-deposit after each confirmed booking** (instant payout — a real differentiator if true)
- Multi-space dashboard: “Courts, grounds, halls, studios — one dashboard manages every space with its own pricing and settings” (this is broader than sports — they’re going after banquet halls, event spaces, studios too)
- **“KhelPoint Shield”** — a dispute-resolution team that handles cancellations/no-shows so owners don’t have to argue with customers directly
- Published roadmap (rare for this market):
 - *Live now:* booking/payments, real-time calendar, revenue dashboard/payouts, customer app distribution
 - *Q3 2026:* multi-space scheduling, staff sub-accounts, SMS/WhatsApp alerts, loyalty discount engine
 - *Q1 2027:* AI-powered dynamic pricing, demand forecasting reports, cross-venue analytics, API access

⚠ **Important caveat on their testimonials:** KhelPoint’s site displays 30+ “owner testimonials,” each following an identical template (First+Last Name, Venue Type, City) and collectively covering an implausibly systematic sweep of nearly every mid-size Pakistani city — Lahore, Karachi, Islamabad, Faisalabad, Rawalpindi, Multan, Sialkot, Gujranwala, Hyderabad, Peshawar, Quetta, Bahawalpur, Abbottabad, Sargodha, Sukkur, Mardan, Jhang, Sahiwal, Okara, Rahim Yar Khan, Kasur, Chiniot, Khanewal, Sheikhpura, Larkana, Nawabshah, Vehari, Bhakkar, Layyah, Toba Tek Singh — down to sub-tier cities that wouldn’t organically generate this volume of glowing, uniformly-formatted feedback for an early-stage platform. **I’d treat these as marketing copy, not verified user feedback**, and wouldn’t cite “50+ partner venues” or “1,400+ players” as confirmed either without independent verification. The *feature roadmap itself* looks genuine and well thought out — it’s the social proof that reads synthetic.

2.5 PakPlay (pakplay.co)

Positioning: Broad discovery platform — 504+ venues, 16 cities, positions itself as the biggest directory rather than the deepest tool.

Confirmed pricing model (rare — most competitors don’t publish this): - **PKR 999/month flat SaaS fee + PKR 5,000 one-time onboarding fee**

- This is a **subscription model, not commission-based**

Stated owner features: unlimited venue listings, advanced analytics/insights, WhatsApp notifications, priority support, automated booking management, real-time availability sync, customer review management.

Takeaway for Courtify: This is the clearest evidence of an alternative business model in your own market. If PakPlay can get owners to pay PKR 999/month + 5K setup, it tells you Pakistani venue owners **will** pay a flat fee if the value is clear — you don’t have to default to commission-only. Worth stress-testing both models with actual court owners during your onboarding visits (which you’re already doing).

2.6 The “White-Label Reality”: Legends Arena, Skedda, Playbypoint

This is the most important structural finding of this research.

Legends Arena — DHA Phase 5, Karachi’s flagship premium padel/multisport complex, backed by Total Sports and partnered with Bank Alfalah — runs on: - **Playbypoint** (US-based racquet-sports SaaS) for its Karachi facility - **Skedda** (Australian scheduling software) for another location

Neither is custom-built. Both are foreign SaaS tools, white-labeled under the Legends Arena name so players never notice.

What Playbypoint (the more feature-rich of the two) actually offers owners, in detail: - Club manager roles with tiered admin access (not just one owner login — sub-accounts with permissions)

- Digital waiver/liability release collection built into the booking flow
- “Game Match” — a social matchmaking layer designed specifically to fill empty court slots by connecting solo players
- Full branding/landing-page customization (facility “Discover” page, custom posts/announcements)
- **Self-service kiosk mode** — an in-venue tablet/kiosk for walk-in check-in, account creation, and digital signature capture without staff involvement
- Deep reporting: sales, transactions, payroll, revenue, and custom report building
- POS integration — sell gear, rentals, and snacks with built-in inventory tracking, not just book courts
- Membership/access-tier management with renewals
- Smart conflict-prevention rules across multiple space types (courts, simulators, classes) in one scheduling engine
- Multi-location oversight from a single dashboard for operators running several venues

This is the actual **feature ceiling** in this category globally, and it’s worth knowing even though no Pakistani competitor has built anything close to it yet.

2.7 Global Category Leader for Context: Playtomic Manager

Referenced directly in your own pitch deck’s “Why Now” slide, so worth understanding in detail.

What they offer clubs: - Real-time occupancy/booking-pattern analytics (“see what’s working, when courts are busiest, where to grow”)

- Social/community features (open plays, leagues) marketed explicitly as retention drivers, not just booking tools
- Access to Playtomic’s global player network as a discovery channel (their biggest selling point — “part of the world’s largest racket sports community”)
- 215+ person team dedicated to club success (support-heavy model)

Real complaints from actual reviews (Trustpilot, 109+ reviews, and SourceForge): - Players charged **unexplained multiple/extra fees** beyond the agreed amount — a recurring, serious complaint

- **Support is AI-chatbot-first** with no clear escalation path — “you can only chat with an AI bot who can’t solve it”
- Platform-side match/lesson cancellations happening **without the club’s knowledge**, leaving players stranded
- A UK-based club complained that support communication was **primarily in Spanish** despite repeated requests, with “no complaints process for when things go wrong”
- No refund follow-through complaints (money owed after cancellations not returned promptly)

Takeaway for Courtify: This is a gift — a globally dominant platform with a specific, well-documented trust failure (billing transparency + support responsiveness). If Courtify

can guarantee (a) zero surprise fees and clear upfront pricing, and (b) real human support with a visible resolution path — not an AI wall — that’s a concrete, provable differentiator you can put directly in your pitch and your product copy, not just a vague “better support” claim.

3. Feature Comparison Matrix

Feature	PlayPro	Poncho	On Spot	KhelPoint	PakPlay	Playbypoint (global bar)	Courtify (current)
Real-time booking calendar	✔	✔	✔	✔	✔	✔	Planned
Manual/phone booking entry (admin)	✔	—	—	—	—	✔	Planned
Multi-venue / multi-court dashboard	✔	—	—	✔	✔	✔	Planned
Online payments in-app	✔	✔	✔	✔	— (WhatsApp confirm)	✔	Planned
Auto/instant payout to owner	Unclear	Unclear	Unclear	✔ (claimed)	Unclear	✔	Gap to close
Revenue/analytics dashboard	Unclear	—	✔	✔	✔	✔ (deep)	Gap to close
Dynamic/peak-hour pricing	—	—	✔	Roadmap only	—	— (mostly static)	Differentiator opportunity
Staff sub-accounts / role permissions	—	—	—	Roadmap only	—	✔	Differentiator opportunity
Tournament/event management tools	✔	✔ (ranking-tied)	—	—	—	✔	Planned (GTM slide)
Membership / loyalty programs	—	—	—	Roadmap only	—	✔	Differentiator opportunity
Dispute/no-show mediation team	—	—	—	✔ (claimed)	—	Unclear	Consider
SMS/WhatsApp automated reminders	Unclear	✔	Unclear	Roadmap only	✔	✔	Planned
Player CRM (history, preferences, tags)	—	—	—	—	—	✔	Differentiator opportunity
Self-service kiosk for walk-ins	—	—	—	—	—	✔	Consider (v2)
Branded/white-label owner page	—	—	—	—	—	✔	Consider (v2)
Waiver/liability collection	—	—	—	—	—	✔	Consider (v2)
POS / inventory (gear, snacks)	—	—	—	—	—	✔	Not urgent
National federation ranking integration	—	✔ (Padel Fed)	—	—	—	—	Consider for cricket/futsal
Coaching marketplace tie-in	—	—	—	—	—	Partial	✔ Already in your GTM

“—” means not publicly confirmed/found, not necessarily absent.

4. Business Model Comparison

Platform	Model	Detail
PlayPro	Likely commission	Not publicly disclosed
Poncho	Likely commission	Not publicly disclosed
On Spot	Likely commission	Not publicly disclosed
KhelPoint	Unclear, likely commission	No pricing page found
PakPlay	Flat SaaS subscription	PKR 999/month + PKR 5,000 onboarding
Playtomic	Commission + service fee	Player-side “service fee” on top of court price (source of complaints)
Playbypoint	SaaS subscription (enterprise)	Custom pricing, not published
Courtify (current plan)	5% commission	Per your pitch deck

The one clear takeaway: you’re not locked into commission-only by market convention — PakPlay proves flat-fee SaaS works here too, and it might actually be an easier sell to skeptical, cash-flow-conscious court owners than “we take a cut of every booking,” especially in your GTM phase where you need owners to trust you enough to list for free initially anyway.

5. What Owners Actually Complain About (Synthesized from Real Reviews)

- Surprise fees / unclear pricing** (Playtomic) — biggest trust-breaker found in this research
- Support that’s a wall, not a person** (Playtomic AI bot, no escalation) — directly actionable for you as a 3-person team who *can* actually answer WhatsApp messages personally in your early days

- 3. **Broken OTP/auth at signup** (Poncho) — technical reliability at the exact moment of first impression
- 4. **Platform cancels things without telling the venue** (Playtomic) — a coordination/communication failure between platform and venue
- 5. **No-shows eating into revenue** — repeatedly cited as solved by pre-payment + reminders (KhelPoint testimonials, Playtomic messaging) — this is one of the few claims that shows up independently across multiple sources and is plausible on its face, unlike KhelPoint’s city-by-city testimonial wall

6. Concrete Recommendations for Courtify’s Court Owner Dashboard

Tier 1 — Build for Launch (Table Stakes)

These aren’t differentiators, they’re the price of entry. Every competitor has them; skipping any one makes you look unfinished to a court owner who’s already seen 2-3 pitches from PlayPro/On Spot/Poncho reps. - Real-time booking calendar (day/week/month views) - Manual booking entry for phone/walk-in customers (court owners still get WhatsApp/call bookings — don’t force 100% app adoption on day one) - Multi-court/multi-sport management under one login - In-app payments (Easypaisa/JazzCash + card) with **clear, itemized pricing shown before confirmation** — this directly undercuts Playtomic’s #1 complaint - Basic revenue dashboard: daily/weekly/monthly earnings, booking count, occupancy %

Tier 2 — Build to Differentiate (Months 3-9)

This is where you actually win owners away from PlayPro/On Spot rather than just matching them. - **Instant or same-day payout** (not weekly/monthly settlement) — KhelPoint claims this, Playtomic doesn’t clearly offer it; if you can genuinely deliver same-day, put it in bold on your sales pitch - **Dynamic/peak-hour pricing controls** — only On Spot claims this among Pakistani players; letting an owner set “6-9pm weekday = +20%” themselves is a real utilization lever - **Simple player CRM** — even a basic “this customer has booked 12 times, last booking 3 days ago” view is something *none* of your local competitors publicly offer, and it’s what lets an owner text a lapsed regular directly - **A real human support channel** in your first 6-12 months — you can staff this yourselves at your current scale, and it directly answers the #1 documented failure point of the global category leader - **Automated WhatsApp reminders** to reduce no-shows — cheap to build, high perceived value, matches what owners actually praise in reviews

Tier 3 — Consider for v2/v3 (Post-PMF)

- Staff sub-accounts with permission tiers (needed once you have venues with actual front-desk staff, not just an owner)
- Loyalty/membership programs tied to your platform-wide user base (this is actually a real Courtify advantage — you’re not single-venue like Playbypoint, you can do cross-venue loyalty which none of your local competitors can, since none of them have built genuine platform-wide network effects yet)
- Self-service kiosk mode for high-traffic venues
- Waiver/liability capture (more relevant once you add higher-injury-risk sports)
- White-label branded pages for premium venue partners (a good “enterprise tier” upsell)

One Pricing Recommendation Worth Testing

Don’t assume 5% commission is the only viable model just because it’s what’s in your deck. PakPlay’s flat PKR 999/month + 5K onboarding proves Pakistani owners will pay subscription fees. Consider **offering owners a choice at signup**: 5% commission with zero upfront cost (lower risk, better for skeptical first-time partners) vs. a flat monthly fee once they’ve seen real booking volume (better margins for you once trust is established, and appeals to higher-volume venues who’d rather pay a predictable fee than a percentage that grows with their success). This kind of optionality is something *none* of your competitors currently offer — everyone’s picked one model and stuck with it.
